

Translating Research into Care Through Clinical Trials Ecosystem Development in Atlantic Canada

Announced at the BIO International Convention in June, the Atlantic Clinical Trials Network (ACTN) is working to enhance research and innovation, introduce new healthcare opportunities for patients, and position the region as a world-leader in clinical trials.

This collaboration will improve the ecosystem for homegrown medtech and pharmaceutical companies to have a first experience to build credibility. It will also attract national and international companies to host their trials in the region, bolstering R&D, our regional economy, and most importantly patient outcomes.

Join our panel session of healthcare, research, and industry leaders as they explore the ways they can work together to advance the clinical trials ecosystem in Atlantic Canada.

Moderator: Hugh Scott, Executive Director, Strategic Alliances, Innovative Medicines Canada

Panelists include:

- Brigitte Sonier-Ferguson, Acting CEO, Atlantic Cancer Research Institute & Vice-President University Mission, Vitalité Health Network
- Dr. Gail Tomblin Murphy, Vice President, Research Innovation and Discovery & Chief Nurse Executive, Nova Scotia Health
- Lisa MacDonald, Senior Director, Clinical Research, IMV
- Stephanie Guillemette, National Medical Advisor, Oncology, Novartis Pharma Canada Inc
